At first, trying a "Dictionary attack"

📙 **Dictionary Attack**

😠 **Brute Force Attack**

Dictionary attack tries words from a dictionary file in case a common password was used, Brute force attack tries every possible combination of charactes to find a match (which may take a lot of time).

↓

Brute Force Attack settings

Steps:

1. If you know nothing about the password, start with shorter character sets.
2. Set the length of the password to 1-5 characters and gradually increase it along the way.
3. If the attack did not succeed, go back to this step and change the character set or password length. Start the attack again.

Character sets:

[0-9, a-z, A-Z ▾]

Password Length

From: [1▾]   To: [8▾]
